Shyam Jayakumar, CEO,
Twenty20 Systems

We're very excited about our partnership with Denodo as we continue to help our customers streamline and accelerate access to data in support of their digital transformation initiatives. Twenty20's deep integration expertise combined with Denodo's market leading data virtualization platform will help our combined customers significantly reduce the amount of time and IT overhead costs in adopting a modern data integration architecture that is flexible and scalable to expanding needs of business without compromising on data integrity and speed.

Accelerate data access and time to market for business

Twenty20 Systems helps customers achieve lasting business outcomes from their ongoing strategic initiatives (omni-channel, digital enablement, legacy transformation, cloud migration) by taking a modernized yet faster approach to delivering reliable and actionable data from across their enterprise. Denodo's data virtualization platform makes this possible with minimal effort and breadth of capabilities. We remain deeply committed to our slogan "Your vision is our mission" through innovation, dedication and flawless execution of consultative projects across industry verticals.

What Business Challenges Are Solved?

For many business of today, the notion of "speed to market" is not a differentiator to succeed anymore but a fundamental necessity to survive. This will remain a challenge hampering progress until access to the underlying data sources is fast and reliable for consumption - whether they are siloed data marts or a centralized data warehouse or data lakes (necessitated by big data, mobile, IOT ingestions).

1. Accelerate Business Outcomes - we bring a modernized architecture (think API-led, logical warehousing, data fabric layer, ELT vs ETL) yet scalable approach to data access without compromising on quality.
2. Cloud Transformation - migrate data and users to Cloud (AWS, Snowflake, Azure) without any business impact to the consumers.
3. Legacy IT Modernization - keeping your IT stack relevant to the changing business needs and not be left behind your competition. We will help you achieve this while continuing to realize value from existing IT investments.

Our Solution

We typically bring the following direct benefits to our customers implementing our solutions:

1. Value realization - from existing IT investments without having to re-invest in new technologies and/or tools through a re-defined modern architectural approach to meeting the data where it resides today. Results in significant cost savings.
2. Speed to data access - as our modernized approach is implemented, consumers typically gain access to reliable, governed and speedy data within a short span of time. Not months on end. IT can re-focus their efforts to becoming true enablers of business outcomes by organizing themselves around innovation and influencing customer experiences through streamlined processes. Results in increase in revenue channels.

About Denodo

Denodo Technologies is the leader in data virtualization providing agile, high performance data integration, data abstraction, and real-time data services across the broadest range of enterprise, cloud, big data, and unstructured data sources at half the cost of traditional approaches. Denodo's customers across every major industry have gained significant business agility and ROI.

PRODUCT OVERVIEW

The Denodo Platform offers the broadest access to structured and unstructured data residing in enterprise, big data, and cloud sources, in both batch and real-time, exceeding the performance needs of data-intensive organizations for both analytical and operational use cases, delivered in a much shorter timeframe than traditional data integration tools.

What are the Features and Benefits of the Combined Solution?

Our combined solution with Denodo as the data virtualization platform helps customers realize accelerated ROI and address immediate speed to market requirements for their business.

Twenty20's MissionImpact offerings that takes pride in delivering impactful mission critical outcomes to your business in a matter of weeks aligns well with the architecture and capabilities that Denodo's data virtualization platform brings to the table. It eliminates the need for data replication and the associated increase in data infrastructure spending costs, while keeping focus on driving speed and impact. Additionally, there is the clearly attributable future value in not accumulating technical debt through data replication over time.

If you are unsure as to whether IT modernization or legacy transformation is important for your business, reach out to us - we will engage to work closely with you in defining the right strategy that fits your business needs.

About Us

Twenty20 Systems is a technology consulting services company that specializes in delivering customized solutions to its customers. We have a strong team of architects and developers globally with extensive experience in architecture/design and implementation of data integration and analytical solutions. In addition, we also provide Cloud and DevOps services. We take a lot of pride in delivery excellence across various industry verticals – delivered in onshore, nearshore, and offshore models.

Our services include:

1. Strategic: solution assessments, enterprise strategy/roadmaps, architecture advisories, proof of concepts and evaluation support)
2. Implementation: project-based, migration services, and staff augmentation
3. Training and enablement

In this fast-paced, digitally-powered economy, businesses of today look for technology partners who truly understand what it means to be an enabler in making the business succeed. This is what Twenty20 Systems will become to you - a technology partner and a trusted advisor in realizing in your business vision.
